Our Odorization System

We have many experience of Odorizing system to Japanese Gas company for a long time.

- Engineering & Manufacture
- Quality
- Maintenance
- Portable tank

We make our odorizing system not only our standard system but also customized system (low pressure to high pressure) which is adapted to customer needs.

Standard model

■ By-pass System

Odorant by-pass injecting to gas pipe line

■ Pumping System

Odorant by pumping injecting to gas pipe line

■ Direct odorizing to Liquid

Odorant direct injecting to gas
Unnecessary of flow adjustment

Customized model

◆ **Odorizing to Hydrogen gas, first in Japan**

The odorization system adapting flow adjustment and pressure adjustment

◆ **Our design as united with Odorization system and Deodorizing device**

Customer can install our Odorization system in limited place

◆ **Our design of piping in our odorization system protected leakage of odorant from piping**

Our design in piping is welding specification to protect leakage of odorant from fitting of piping

◆ **Our design adopt special material suitable to odorant**

For long life of odorant system, we are engineering and manufacturing special manufacture suitable to odorant

◆ **Large tank for storaged Odorant**

we can be engineering and manufacture largest capacity tank which is from 3000L to 5000L

◆ **Pressure management of odorant pump and odorant tank**

Our odorizing system can manage the discharge pressure of pump and pressure of odorant tank

◆ **Management of liquid level management of odorant tank**

Our odorizing can manage the liquid level at millimeter and customer can manage to operate in good condition
